Husky?

Husky - Health Usability Key

The Husky project is an open-source and makes working with international eHealth standards easier by providing a convenience API for IHE transactions and health resources/documents.

The project is country independent but currently implements Swiss extensions.

What does Husky and eHealth have in common?

A husky sled and eHealth integration project share a common trait: both require **coordination, endurance, and teamwork** to reach their destination.

Just as a husky needs **direction and collaboration** with its team to pull the sled efficiently, healthcare integration relies on seamless collaboration between systems and technologies to deliver unified healthcare solutions.

Both depend on strong, **synchronized efforts** to overcome obstacles and achieve their goals...

The Husky Project...

What's inside?

- Overview of the key features, supported protocols, ...
- Practical examples and scenarios where the library shines

How to simplify the Integration ?

- Convenience API for XDS.b
- Simplifying handling of EPD Resources

What's next ?

- Upcoming developments
- Upcoming project events

Implemented IHE Profiles

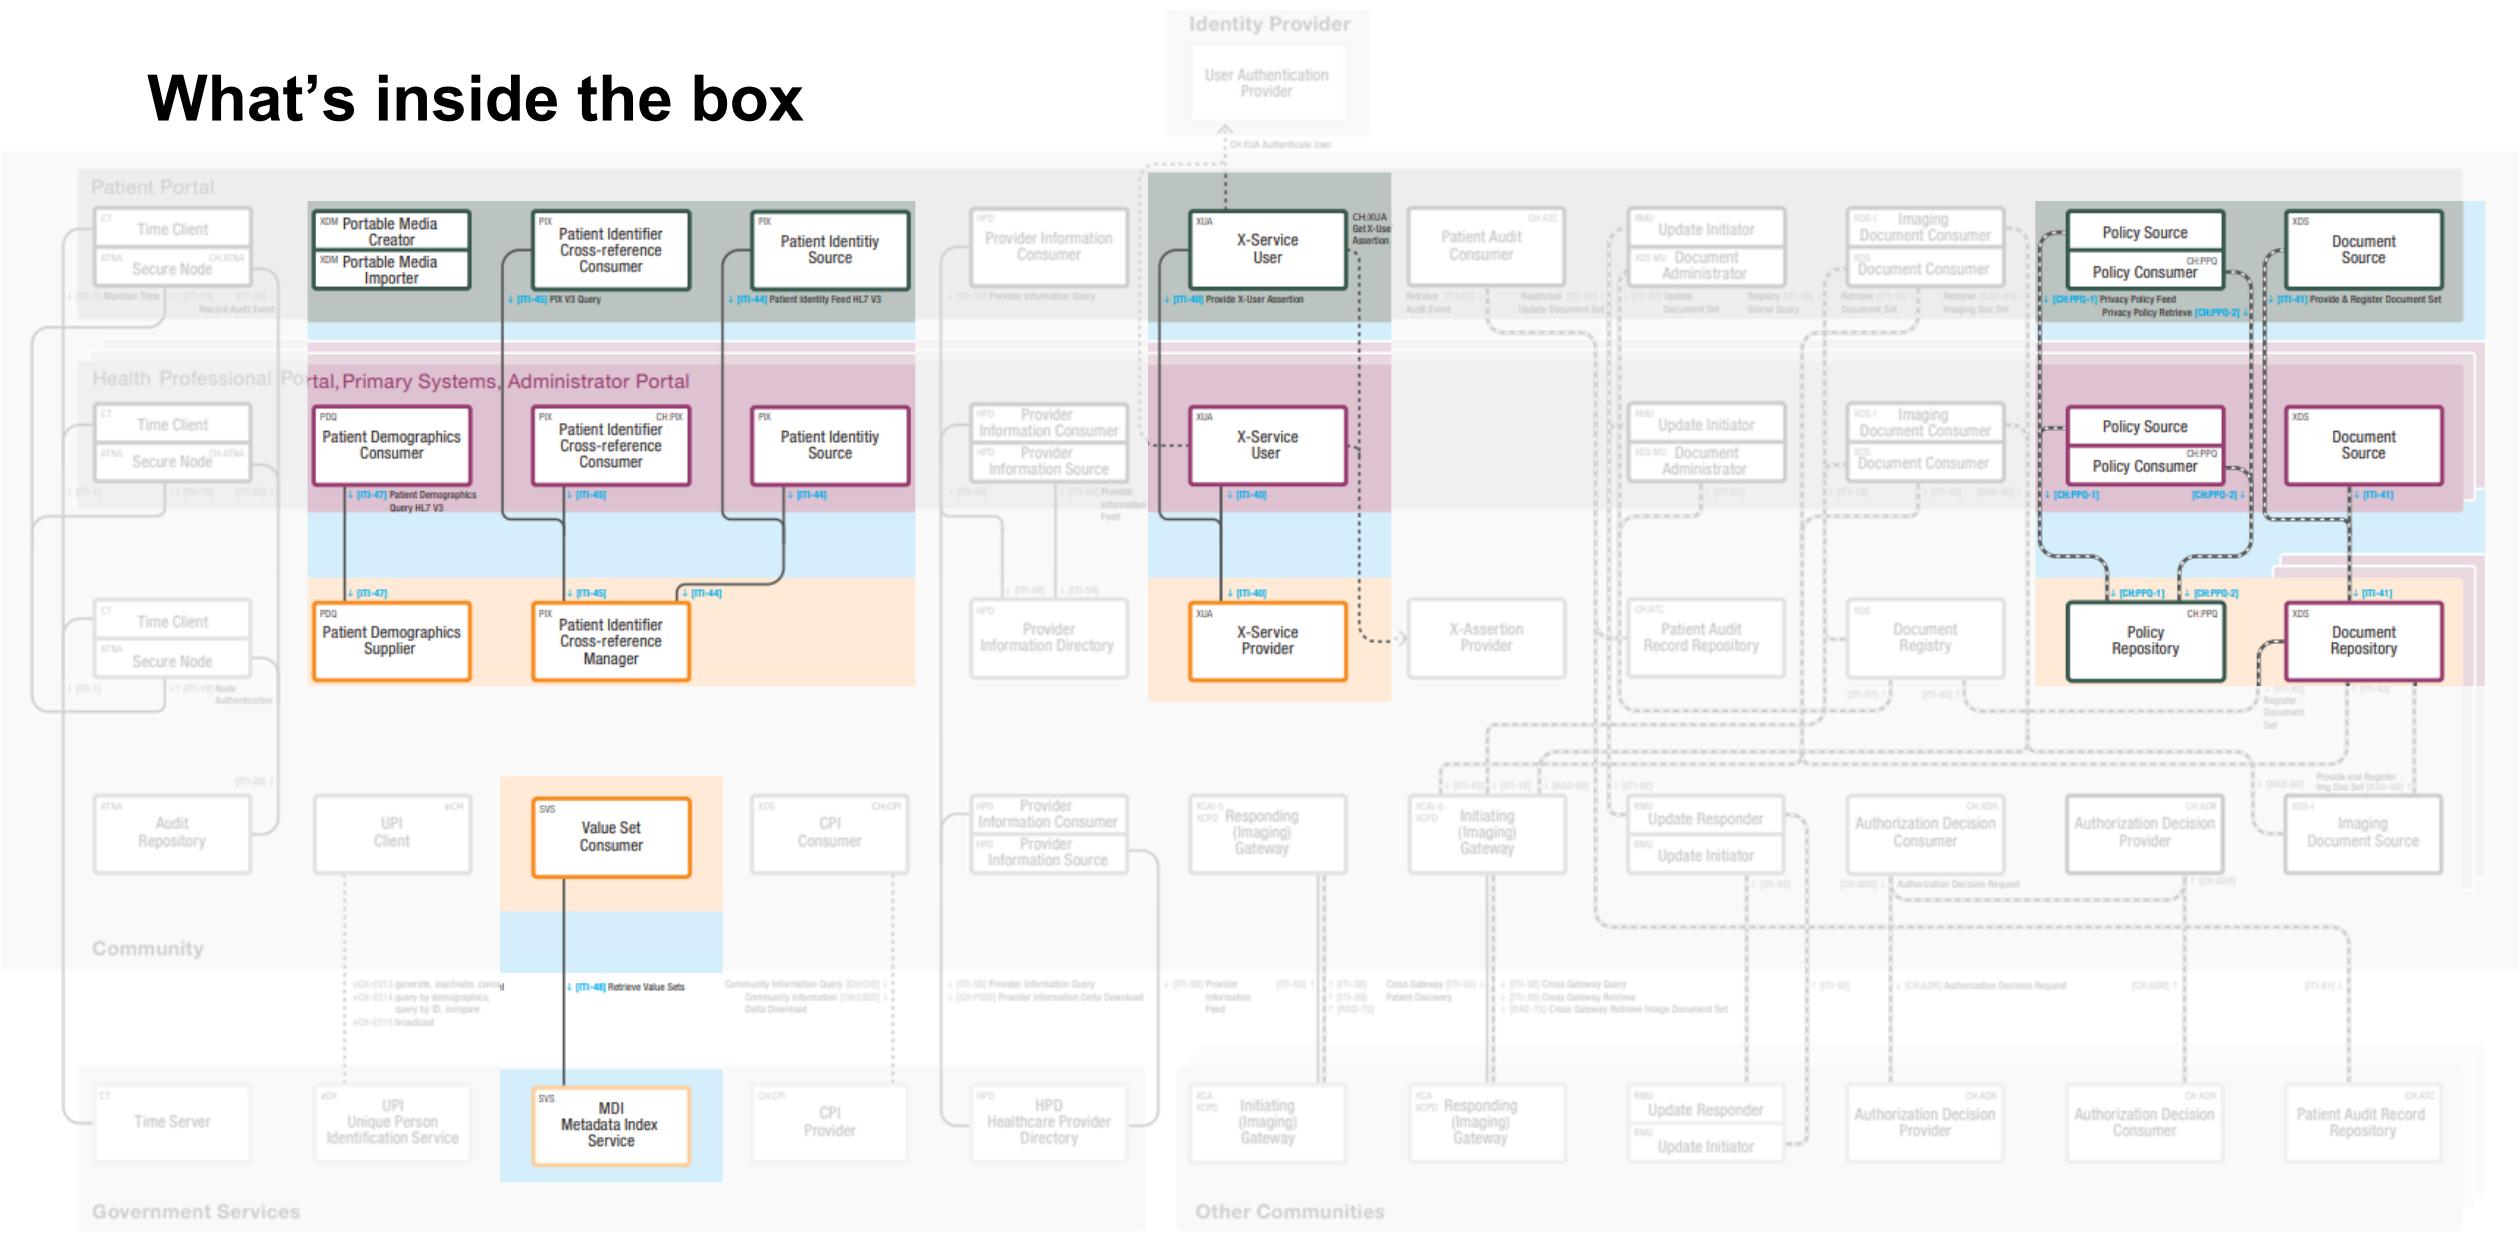

Husky offers support for multiple IHE ITI profiles. For each profile transaction there is a convenience method.

Supported profiles are

Profile	Transaction	Description
PDQ	ITI-47	Query patient demographics
PIX	ITI-44, ITI-45	Patient identity transactions
PPQ	PPQ-1, PPQ-2	Privacy Policy Queries
SVS	ITI-48	Retrieve value set
XDM	ITI-32	Exchange of documents via standard media
XDS	ITI-18,ITI-41,ITI-43	Exchange of documents
XUA	ITI-40	Provide identity assertions

What's inside the box

What is your challenge...

What is your biggest challenge when it comes to system integration in healthcare?

- Dealing with Patient identity Management ?
- Compliance with standards ?
- Handling healthcare formats ?

- Interoperability across different systems ?
- Security concerns ?
- Maintenance ?

How much can you invest in custom development to integrate to the EPD?

A dense cluster of many Husky puppies looking directly at the camera.

WAIT A MINUTE!

What is your challenge...

What is your biggest challenge when it comes to system integration in healthcare?

- Develop only once upcoming changes
- Minimize maintenance costs near to zero
- Ensure compliance with EPD Standards and upcoming healthcare standards.

- Benefiting from interoperability / security updates
- Sharing assets knowledge and avoid vendor lock-in
- Isolating / standardize the integration layer

How much can you invest in custom development to integrate to the EPD?

The Husky Project is also...

What's inside?

- A motivated team contributing and moving this project forward
- Support from eHealth Suisse and IHE-Suisse

How to simplify the Integration

- Share knowledge and avoid common pitfalls and technical hurdles
- Development synergies on the integration layer

What's next ?

- Collect user needs, build a backlog
- Steer upcoming developments and coordinate contributions

The whole is greater than the sum of its parts.

- **Husky is an open-source project, like IHE profiles, all resources and/or assets that are shared and maintained by a community and accessible to all its members for free.**
- The **synergy created by collective contributions**, shared knowledge, and diverse expertise allows for rapid innovation, faster problem-solving, and **continuous improvement**.
- Practically, this means **cost effective changes, less maintenance efforts and by principle stronger security software**.

WE NEED YOU!

Husky simplifies woofs the complexity of your eHealth integration
